Unicon 18

10k Standard and Unlimited Competition

The results for the 10k have posted and available online. There were multiple problems tabulating and organizing the data in order to publish results. The following is a brief summary of the issues. We believe we have resolved all problems. However, if you have a problem with your finish time, please tell InfoPoint.

Issues:

- The race started slightly later than the timing personnel were expecting, requiring changes to the timing-data program calculation.
- The finish line timing mat requires a certain amount of space to correctly time data. Not enough space was allowed, resulting in multiple data points for some people and extremely long finish times for others.
- Some riders were registered in the wrong category for their chosen wheel size, requiring a change in category.
- Some riders did not follow proper check-in procedures.
- Not all competitors finished the race and some of these did not report to the finish-line staff.
- Some riders required replacement chips.
- Some chips were not matching the bib number.
